A NEW PHASE-SENSITIVE DETECTOR FOR AC
BRIDGES. [1961] [30]p. 10 refs.
Order from SLA \$2.60

61-18917

Trans. of Periodica Polytechnica (Hungary) 1958, v. 2,
no. 4, p. 333-354.

DESCRIPTORS: *Phase detectors, Sensitivity, *Elec-
tric bridges, Alternating current, Impedance, Oscilla-
tor circuits.

In many scientific and technical problems it is neces-
sary to determine the magnitude and direction of the
relative deviation of various small impedances. AC
bridges with phase-sensitive detectors are usually used
for this purpose. This paper describes a new type of
circuit for the oscillator and detector unit and gives
some examples of its application. (Author)

THE CALCULATION OF MEAN REDUCTION IN PASS
ROLLING. Feb 49 [17]p. 4 refs. BISI-372; [DSIR LLU]
M. 2776.

Order from OTS or SLA \$1. 60

61-23304

Trans. of Stal' (USSR) 1948 [v. 8] no. 3, p. 232-240.

DESCRIPTORS: *Metals, Processing, Mathematical
analysis, Rolling mills, Pressure.

Instead of the approximate methods of calculating mean
reductions being used at present (method of calculating
from the width of the strip and from the "corresponding
section") the displaced-volume method, which is based
on theoretical considerations, should be adopted. An
accurate evaluation of the mean reductions is necessary
in connection with the determination of the increase in
width and of the pressure on the rolls (size of the sur-
face of contact). The paper presents solutions for the
rolling in oval and square passes. (Author)
